AURORA Logistics

A fictional network deployment · Montréal HQ / Québec distribution / private cloud

180 people · 2 sites · dual WAN

Addressing & deployment notes

Illustrative configuration only · public addresses use documentation ranges
DR cloud: gateway 10.60.1.1 · workloads 10.60.20.0/24 · database 10.60.30.0/24 · vault 10.60.90.0/24

VLAN	Purpose	Montréal HQ	Québec branch	Gateway / control
10	Management	10.40.10.0/24	10.50.10.0/24	Firewall .1 · admin MFA
20	Wired clients	10.40.20.0/24	10.50.20.0/24	Firewall .1 · DHCP
30	Voice	10.40.30.0/24	10.50.30.0/24	Firewall .1 · QoS
40	Corporate Wi-Fi	10.40.40.0/24	10.50.40.0/24	Firewall .1 · 802.1X
50	Guest Wi-Fi	10.40.50.0/24	10.50.50.0/24	Internet only · deny RFC1918
60	IoT / cameras	10.40.60.0/24	10.50.60.0/24	Allowlisted services only
70	Servers	10.40.70.0/24	Not deployed	Internal app + directory
80	DMZ	10.40.80.0/24	Not deployed	HTTPS reverse proxy only
90	Backup	10.40.90.0/24	Not deployed	Repository isolation

Deployment notes

Resilience

Active / passive firewall pair.
Both WANs shown at the active HA VIP.
Standby takes over; WAN cabling is abstracted.
L2 MLAG cores; dual access uplinks.
Hypervisor cluster on isolated shared storage.

Access & security

Guest networks have Internet access only.
Management requires MFA via jump host.
IoT reaches DNS / NTP and allowlisted services.
Backups use separate credentials and VLAN.

Deployment sequence

1. Stage VLANs, DHCP, DNS and policies.
2. Test WAN / firewall / core failure paths.
3. Migrate clients and application workloads.
4. Verify VPN, monitoring and restore a backup.
